

SUPATRACKS TRACK CARE GUIDE

Spring is here, which means its time for us to replace our ATV or UTV's track system with tyres. Elements such as mud, dust, water and humidity can alter and corrode the moving parts of your tracks system during storage, so now is the perfect time to carry out season change maintenance of your Camso track system. Here is how:

- 1. Carefully group and label all components to avoid confusion. Remove the plates first, then the wheel nuts and finally, the rest of the system.**

SUPATRACKS PRO TIP: Always remove all track system anti-rotation brackets and their components before reinstalling the wheels. Leaving the brackets attached to the suspension arms could cause interference and potentially damage the vehicle.

2. Clean each track system.

Gently remove all dirt and debris using a biodegradable degreaser and gentle spray of water. If using a pressure washer, work with extreme care because the spray can damage rolling components.

SUPATRACKS PRO TIP: Avoid using a brake cleaning solvent, which can damage sealing components and stickers.

3. Inspect all parts.

Look for any signs of damage, wear or cracks. This includes the track, the tie rod, wheels and all bearings.

SUPATRACKS PRO TIP: identify the parts to replace and make a list of any damage or worn out components and order them now from us at Supatracks. That way, you'll be ready for those first track days on your next adventure.

4. Adjust all components.

Refer to your owner's manual and installation guidelines for instructions for your specific track system.

5. Lubricate rolling parts.

Clean the old lubricant and apply a new coat on rolling parts

SUPATRACKS PRO TIP: pour 5 teaspoons of oil under the wheel caps and between the bearings to extend wheel life.

6. Store system horizontally

Store your track systems on their side so that gravity can better disperse the lubricant. This will also prevent water from accumulating in the bearings and other parts so that they do not rust and potentially fail. Always store track systems in a dry location away from direct sunlight.
